

## **NEW CLEAN DRINK**

### *THE NEW STAINLESS STEEL TILTING AND ANTI-FREEZING DRINKING TROUGH*

*The availability of water is essential for the animals' physiological requirements, in particular for cows who need to restore losses due to the production of milk.*

*Water requirement depends both on the climatic conditions, on the productivity of animals and on the typology of feedstuff.*

*The arrangement of reliable watering equipment, capable of protecting the quality of the water, is therefore crucial for the farming success.*

*Rota Guido company has developed a new drinking tank, called "clean drink", that meets both the farmer's and the animals' requirements successfully.*

*It consists of a stainless steel tilting and anti-freezing tank with constant level, available in 3 different length (1, 2, 3 metres), equipped with a tilting device and with a special float, able to control the flow of water, thus assuring a constant recirculation.*
